## DETAILED ACTION

### *Election/Restrictions*

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 31-38, drawn to a method for applying chromaticity corrections to device-independent, classified in class 382, subclass 167.
- II. Claims 13-24, and 28, drawn to a method for determining a correction level based on desired changes in saturation, hue and brightness, classified in class 358, subclass 518.
- III. Claims 25-27 and 29, drawn to a system for applying chromaticity corrections to a display device, classified in class 345, subclass 604.
- IV. Claims 30 and 39, drawn to a white point correction for a display device, classified in class 358, subclass 1.9.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention group I has separate utility such as a method for applying chromaticity corrections to device-independent without a correction level based on desired changes in saturation, hue and brightness, a system for applying chromaticity corrections to a display device, and white point correction. In other word, each one of the inventions recited in groups I, II, III and IV is separately usable in a system not having the other. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the response to this requirement to be completed must include an election of the invention to be examined even though the requirement is traversed (37 CFR 1.143).
